

ANDERSEN

An expertly designed electric charger built to compliment both your home and car. Worth driving home to.

The perception of electric cars is changing. Pollution is at an all time high with the government raising tax for diesel owners to tackle the alarming levels. As of the Budget 2017, the government has pledged to invest £400m in the electric charging points infrastructure demonstrating a demand for this market with nearly all major car manufacturers racing to launch their versions of electric or hybrid plug in vehicles. We've already spotted the potential.

For too long the charging accessory has appeared as an unattractive feature alongside beautifully designed electric cars and homes. At Andersen, we have taken the time to create a charge point that is not only aesthetically pleasing but functions at the highest quality.

A Brief History of Andersen

2015: It all began when founders, David and Jerome, met at work. Both had similar interests such as property but most importantly was their shared entrepreneurial spirit. They noticed an opportunity with

charge points and felt they could make a real difference with David being an electric car owner himself.

2016: Mandy (David's wife) left her M&S Kids wear Design job to begin work on the Andersen brand. Our engineering team in Essex and our product design team started the website and engineering development which began with many essential long hours homing in on the concept of Andersen.

Christmas 2016: Disappointed by the first prototype, the design team was let go so Mandy and David spent Christmas Day tearing apart cardboard boxes and mocking up prototypes underneath the Christmas tree.

2017: Collaboration with Paul Crofts Studios commences, designing the new prototype alongside website development. The Andersen A1 prototype is created in February with the second prototype released in May followed by a refine of design, safety testing, certification, manufacturing, packaging and other essentials.

November 2017: IOT development starts.

Our Product: Andersen A1

- Lifetime guarantee

- Safe fast charging – 7Kw
- Compatible with all electric cars and hybrid cars such as Tesla, Porsche, BMW...
- Certified for all European countries
- 3 years Andersen Care Cover.
- OLEV – UK grant approved charge point.

There is an Andersen for every home with a choice of 8 stylish shades. The A1 is built for complete durability and hand-sprayed for refinement. Sleek, compact and functional; customise the A1 to create the ideal charge point for your home and car.
